

ECOMMERCE PLATFORM

The innovative concept of Elysian will drastically improve current flaws in the Ecommerce industry by integrating blockchain technology to create a revolutionary Ecommerce platform.

• SECURITY

This is a legitimate concern in the realm of Ecommerce, exemplified most notably by the data breaches of Target and Equifax. Elysian will improve this aspect using smart contracts and storing customer data on the blockchain to upgrade security. This will generate a level of trust in the business-to-consumer (B2C) business model that is currently nonexistent.

• USER EXPERIENCE (UX)

Elysian will provide a new experience for consumers by integrating Artificial Intelligence and Virtual Reality into Ecommerce to create useful, efficient website navigation and provide consumers with a more detailed description and visualization of products.

• ATOMIC SWAPS

Vastly improves the convenience of payments in cryptocurrency. Users will have the ability to freely convert to whichever token they desire, including the Elysian token, to eliminate fees and purchase goods in a more efficient manner.

TOKEN SYSTEM

The Elysian token (ELY) will serve as the primary method of access to transactions on the Ecommerce platform. The token will have the capability of being kept in our private wallet and then sent to the Ecommerce platform to facilitate transactions for services, avoiding the hassle of using a card or the outrageous fees of bitcoin. The token will be of the ERC20 format.

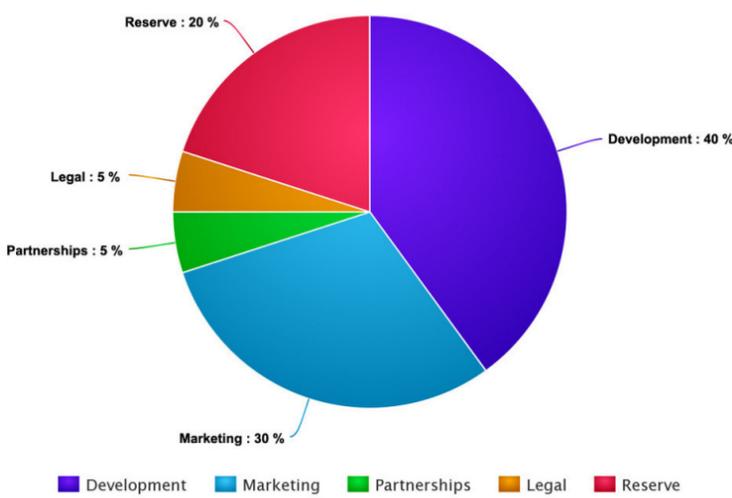

GROWTH POOL

- Designed to promote engagement and interaction between the Elysian team and the community.
- Provides a sustainable business model by allocating the tokens specifically to the growth pool for use after the TGE to fund community campaigns to improve our project.
- The Elysian forum is designed to be used as a means of communication for potential partnerships and future ideas for company expansion. Community members can either use their own tokens to contribute towards the growth of the project, or receive tokens out of the Elysian growth pool to be allocated for specific task completion.
- Voting Rights – Project applications listed on the forum are to be voted on by community members. If the project receives a minimum of 51% “yes” votes, and passes the responsible voting requirements*, the project will receive funding. All tokens contributed by community members to projects that are not approved will be refunded.

* Elysian reserves the right to reject a project if the voting process is not done responsibly by the community, including but not limited to spamming, creation of multiple accounts, or manipulation of community members.

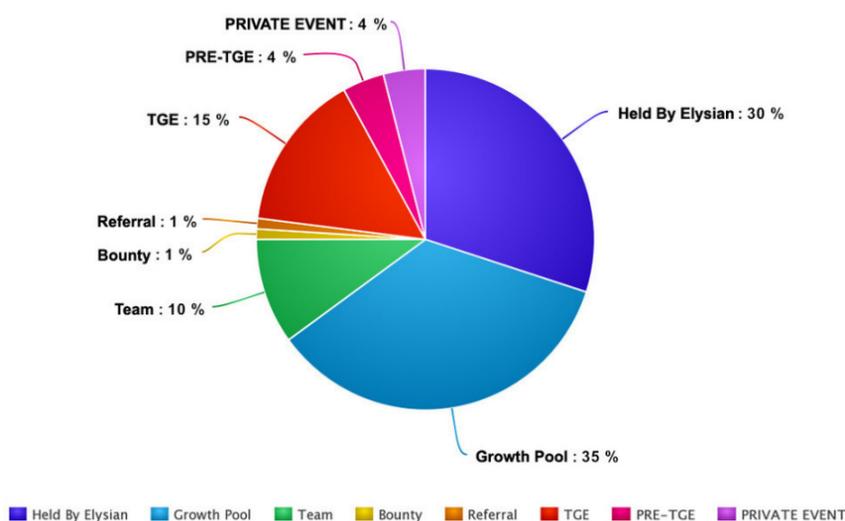

FUND DISTRIBUTION

The graph below outlines the allocation of the funds raised in our TGE. The hardcap is \$7 million.

TOKEN DISTRIBUTION

Elysian will be minting 1 billion total tokens, with a starting circulating supply of 250 million at the completion of the TGE; a number that is subject to future change based on the amount of Growth Pool tokens released per annum. The hardcap for the TGE is \$7 million. The total breakdown of the maximum token supply is outlined below:
